

Microfinance: A lever for building sustainable cities and territories

18th November 2016
Davide Forcella - CERMi

...There are no sustainable cities without sustainable countryside...

- People are affected by environmental degradation and climate change
- Unreliable access to energy, excessive use of resources
- Polluting activities, unhealthy environment

Innovative financial products could support sustainable cities and countryside

- Climate smart agriculture: land restoration, biodiversity conservation, resiliencies, increase yields-quality, ...
- Ecotourism
- Energy efficiency: reduce cost for families, deforestation,...
- Clean energy: delocalized energy provision, access to electricity

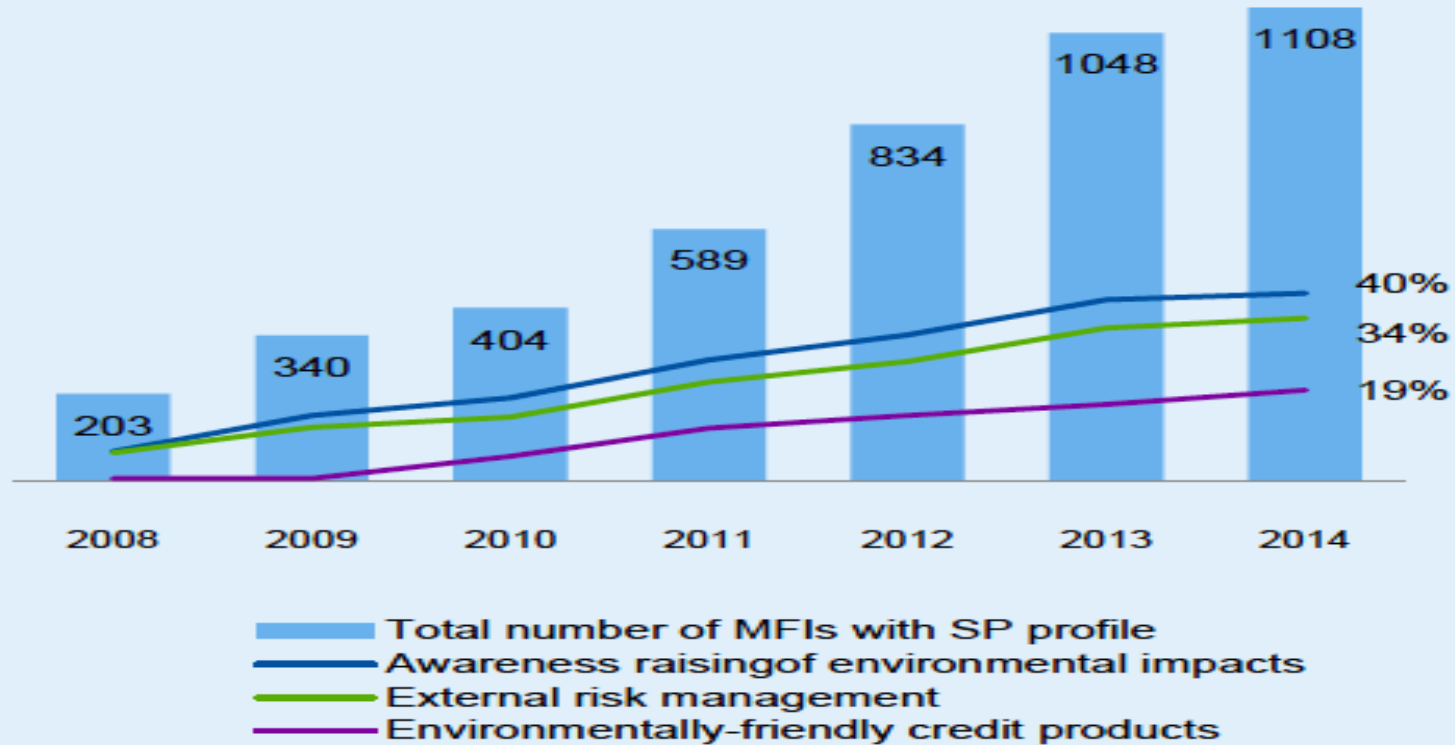

■ What microfinance can do with all that ?

.. **Go green !**
